

(Adopted: 10/07/77)

## RULE 480

### Natural Gas Fired Control Devices

- (a) A person installing or using an Air Pollution Control Device which operates on natural gas shall provide one of the following:
  - (1) A plan, subject to the approval of the Executive Officer which will cause the equipment or source generating the emissions to be taken out of service during a natural gas shortage or curtailment, until approved fuel is restored to the Air Pollution Control Device; or
  - (2) A fuel system approved by the Executive Officer for use during a natural gas shortage or curtailment.
  
- (b) Effective Dates
  - (1) This rule becomes effective on the date of adoption for any equipment subject to the provisions of this rule which is installed or constructed on or after that date.
  - (2) The owner or operator of any equipment subject to the provisions of this rule, which has been installed or constructed prior to the adoption, shall by December 31, 1977, submit:
    - (A) A plan describing at a minimum the steps that will be taken to achieve compliance with the provisions of this rule, or
    - (B) An application for Permit to Construct if the equipment is to be modified.
